12.	Monitoring and optimisation	12

# Executive Summary:

A marketing budget of 200,000 euro is available to spend on digital advertising media between June and December 2020 on behalf of our client HighDog. This budget will be spent towards satisfying the high level objectives that needs to be fulfilled if this engagement is taken by our Agency. The main objectives of this campaign would be market expansion, improving brand awareness, better brand positioning amongst customers, targeting a new segment of non-customers and doubling sales for 2020.

The campaign will focus its efforts on creating awareness, entice consideration and ultimately lead to purchases. This is done using social media platforms to run a mix of ads which will be promoted to our preferred audiences and during the 7 month period we would monitor and optimise every component of our strategy, adapting to the external factors as we go along with the campaign.

Setting KPI's and measuring the performance of the campaign is essential to maximise ROI for our client and thus we would be setting demanding KPI's for our strategy and we will weave our resources with the innovative characteristics of HighDogs product offering and target the audience which will make our objectives materialise.

# Digital Marketing Measurement Model

# Monitoring and Optimisation:

To reassess:

We monitor all paid ads'

- Cost-per-click
- Cost-per-conversion
- Impressions
- Unique Link Clicks

- What times of day/weekdays to deliver the most conversions at the lowest cost
- What are the best-performing target segments
- How to optimise ROI
- How to better support business goals
- Which is the preferred content
- Which platform performs best
- How to reduce costs for our client

Thank You
